

- 1) A network administrator wants to configure a DHCP Server to dynamically update DNS records when clients obtain IP addresses. Match each step on the left with its correct description on the right.

5 (?) out of 5 points

**Open DHCP Management Console** > Access the DHCP server settings.

**Enable "Dynamically update DNS A and PTR records"** > Allow DHCP to register client addresses in DNS.

**Verify the setup using ipconfig /registerdns on a client machine** > Ensures the client properly registers its DNS records.

**Configure DHCP lease duration** > Defines how long an IP address is assigned before renewal

**Navigate to IPv4 properties and select "DNS" tab** > Locate the settings to configure DNS updates.

- 2) A system administrator is setting up a DHCP Server on Windows Server 2022 to automatically assign IP addresses to network devices. Match each step on the left with its correct description on the right.

5 out of 5 points

**Authorize the DHCP Server in Active Directory** > Allow the server to assign IP addresses in an AD environment.

**Create and configure a new DHCP scope** > Define the range of IP addresses available for clients.

**Activate and restart the DHCP service** > Ensure the DHCP service is running and available to clients,

**Set up DHCP reservations for specific devices** > Assign fixed IP addresses to critical devices like printers and servers.

**Install the DHCP Server role** > Add the DHCP role using Server Manager.

- 3) A former employee's account needs to be disabled or deleted in Active Directory. Match each step on the left with its correct description on the right.

5 out of 5 points

**Open "Active Directory Users and Computers" (ADUC)** > Access the AD management console.

**Right-click the user and select "Disable Account"** > Prevents the user from logging in without deleting data.

**Right-click the user and select "Delete"** > Permanently removes the user account from AD.

**Move the user to a Disabled Users" OU** > Organizes inactive accounts without deletion.

**Locate the user account** > Search for the user to be disabled or removed.

- 4) A company needs to set up a DNS Server on Windows Server 2022 to resolve domain names to IP addresses. Match each step on the left with its correct description on the right.

5 out of 5 points

**Test DNS resolution using** > Verify that domain names are correctly resolving

**Configure A (Address) records** > Map domain names to IPv4 addresses.

**Install the DNS Server role** > Add DNS functionality using Server Manager.

**Configure a Reverse Lookup Zone** > Enable IP address-to-hostname resolution.

**Create a new Forward Lookup Zone** > Enable the server to resolve domain names to IP addresses.

- 5) A business wants to centralize printer management using a Print Server on Windows Server 2022. Match each step on the left with its correct description on the right.

5 out of 5 points

**Add printers to the Print Server** > Register printers in the Print Management Console.

**Manage print jobs and queues** > Monitor and control print tasks centrally.

**Configure print permissions** > Assign printing rights to users or groups.

**Set up printer sharing** > Allow network users to access the printers.

**Install the Print Server role** > Use Server Manager to add Print and Document Services.

- 6) A system administrator is tasked with creating a new user in Active Directory on Windows Server 2022. Match each step on the left with its correct description on the right.

5 out of 5 points

**Right-click and choose "New" -> "User"** > Start the user account creation process.

**Select the appropriate Organizational Unit (OU)** > Choose where the user account will be created.

**Enter user details like username and full name** > Provide necessary identification information.

**Set up a strong password and enable the account** > Define login credentials and activate the account.

**Open "Active Directory Users and Computers" (ADUC)** > Launch the AD management console.

- 7) An administrator is setting up an Active Directory Domain Services (AD DS) role on a Windows Server 2022 system. Match each step on the left with its correct description on the right.

5 out of 5 points

**Configure domain name** > Specify the domain name for the new or existing domain.

**Install AD DS role** > Use Server Manager to add the AD DS role to the server

**Promote the server to a domain controller** > Complete the domain configuration and install Active Directory.

**Set up DNS integration** > Choose whether the server will host DNS for the domain.

**Restart the server** > Reboot to apply the changes and complete the setup.

- 8) A network administrator is setting up a DNS server to resolve domain names in Windows Server 2022. Match each step on the left with its correct description on the right.

2 out of 5 points

**Install the DNS Server role** > Use server manager to add the DNS role

**Configure forwarders** > Enable DHCP replay

**Configure A (Address) records** > Define the primary zone to store DNS records

**Create a new forward lookup zone** > Map domain names to IP addresses

**Set up reverse lookup zone** > Enable DNS to resolve IP addresses back to domain names

- 9) A company is hosting a public-facing website and needs to secure its Web Server on Windows Server 2022. Match each step on the left...

5 out of 5 points

**Regularly update the web server software** > Protect against vulnerabilities with patches and updates

**Enable HTTP to HTTPS redirection** > force users to use secure HTTPS connections

**Set up user authentication for admin access** > restrict unauthorized access to website settings

**Install an SSL/TLS certificate** > encrypt web traffic to enhance security

**Configure firewall rules** > restrict access to only necessary ports (e.g., 80, 443)

10) An organization needs to set up a file server to share files across the network. Match each step on the left with its correct...

4 out of 5 points

**Enable SMB protocol** > Allow shared file access over the network

**Install the file server role** > enable file sharing features using server manager

**Create shared folders** > designate specific directories for network file sharing

**Enable shadow copies** > print queue management related to file sharing

**Set folder permissions** > define access rights for users and groups

A company wants to host a website on Windows Server 2022 using IIS (Internet Information Services). Match each step on the left...

5 out of 5 points

**Install the IIS role** > use server manager to add IIS (Internet Information Services)

**Configure SSL/TLS certificate for HTTPS** > Enable secure HTTPS connections for the website

**Create a new website** > Set up a site in IIS Manager with a unique name and directory

**Configure firewall rules to allow HTTPS/HTTPS traffic** > Ensure web traffic is not blocked by the firewall

**Assign a static IP Address or domain name** > Configure DNS or IP settings for site accessibility

A company is adding new employees and needs to create user accounts in Active Directory. Match...

5 out of 5 points

**Enter user details** > Provides the user's name, username, and login details

**Click on "New" -> "User"** > Start the user creation process in ADUC

**Select the Organizational Unit (OU)** > Choose the appropriate OU where the user will be placed

**Open Active Directory Users and Computers (ADUC)** > Launch the GUI tool to manage user accounts

**Set permissions and group membership** > Assign roles, permissions, and group access for the user

An employee has forgotten their password, and the IT department needs to reset the password in Active Directory. Match...

5 out of 5 points

**Enable “User must change password at next logon”** > Force the user to create a new password.

**Right-click the user and select “Reset Password”** > Start the password reset process

**Locate the user account** > Search for the user needing a password reset

**Enter a new password and confirm it** > Define a secure new password

**Open “Active Directory Users and Computers” (ADUC)** > Access the user management console
